CHESSCON LIVE VIEW – AND YOUR DIGITAL TWIN COMES TO LIFE

The new application CHESSCON Live View provides an intuitive overview of your terminal in a real-time 3D-view

akquinet

Your advantages with CHESSCON Live View

- ✓ 3D view with detailed dashboards on equipment and inventory
- ✓ all moving assets in real time, all aspects visualized
- ✓ unlimited number of attributes
- ✓ a full scope digital twin of your terminal

Full and Intuitive Overview

CHESSCON Live View reads the container inventory and the entire machinery and equipment status from a TOS or any other database. The equipment and all vehicles such as straddle carriers and cranes can be connected to the system (using e. g. TIC 4.0 standardized messages). External data from shipping companies and freight forwarders can also be integrated into the system. These data offer the basis for the intuitive overview of the terminal in real time and in 3D.

Improved Analysis

With detailed dashboards of all inventories with an unlimited number of attributes (POD, POL, Voyage, …) you can improve your analysis. Statuses of vehicles and equipment can be analysed retrospectively.

Better Planning

Users can click on individual equipment and vehicles to view dashboards with details. All objects can be filtered and coloured. This facilitates and improves an intuitive short- and medium-term planning.

CHANGE YOUR WAY OF WORKING WITH CHESSCON LIVE VIEW: PLAN PRO-ACTIVELY INSTEAD OF ONLY RE-ACTING!
